Page 1: Understanding Paediatric Neurology

The brain and nervous system are the command centre of the human body. When they malfunction, it affects the entire body, which is why paediatric neurology is crucial. A paediatric neurologist specializes in treating children with brain development and nervous system issues from birth to adulthood.

At Dheemahi Clinic, we offer comprehensive care tailored to your child's needs, focusing on neurological disorders from infancy to adolescence. Led by **Dr. Yatheesha B L**, our team brings expert knowledge and advanced training in treating child-specific neurological conditions.

Page 2: Meet Dr. Yatheesha B L

Dr. Yatheesha B L, a leading paediatric neurologist, is passionate about child development and has made significant contributions throughout his career. After graduating from **M S Ramaiah Medical College** in 2003 and completing a **Diploma in Child Health (DCH)**, Dr. Yatheesha pursued a **Post-Graduate Diploma in Developmental Neurology (PGD-DN)** and a **Fellowship in Paediatric Neurology** from **Amrita Institute of Medical Science, Kochi**.

At Dheemahi Clinic, we treat various conditions such as epilepsy, migraines, cerebral palsy, brain injuries, and developmental disorders. Our mission is to provide personalized, compassionate care to help your child thrive.

Reasons to Consult a Paediatric Neurologist:
If your child experiences any of the following, consulting a paediatric neurologist is crucial:

- Frequent headaches or seizures
- Developmental delays
- Unexplained loss of consciousness or balance issues
- Walking problems or poor motor coordination
- Memory loss, tremors, or unusual tics

Conditions We Treat:

1. **Epilepsy** – Repeated seizures caused by electrical surges in the brain.
2. **Headaches & Migraines** – Tension or stress-related headaches.
3. **Neurological Infections** – Infections like meningitis and encephalitis.
4. **Developmental Disorders** – Conditions like Down Syndrome, Autism, ADHD, Cerebral Palsy.
5. **Intellectual Disabilities** – Delays in mental abilities and daily life skills.
6. **Stroke in Children** – Sudden blood flow disruption to the brain.
7. **Movement Disorders** – Excessive or insufficient movement like tics or tremors.

8. **Neuromuscular Disorders** – Issues affecting the muscles and peripheral nervous system.
9. **Newborn Neurological Disorders** – Early detection and therapy after birth to prevent further brain damage.
10. **Neurometabolic Disorders** – Enzyme dysfunction affecting brain development.
11. **Neurodegenerative Diseases** – Conditions leading to a progressive loss of neurological function.

Page 4: State-of-the-Art Services at Dheemahi Clinic

Neurophysiology Lab:
We offer advanced testing to diagnose brain and nervous system conditions accurately. Our skilled technicians perform these tests with precision, ensuring accurate results for effective treatment.

Neurological Rehabilitation:
Our rehabilitation program, supervised by medical experts, focuses on improving patient function, reducing symptoms, and enhancing overall well-being. With tailored treatments, we ensure children recover faster and stronger.

Did You Know?

- 15% of children aged 3 to 17 years have a developmental disability.
- **Global Developmental Delay (GDD)** affects 1% to 3% of children.
- **Cerebral Palsy** prevalence ranges from 0.31% to 0.36%.
- **Autism Spectrum Disorder (ASD)** prevalence is around 1.4% among 8-year-olds.
- Learning disabilities such as reading, math, and writing disorders impact between 5.3% to 14.7% of children.
