Seo site audit

Website: https://sripaa.com/

Date: 22/11/2024

1) Heading Tag Test

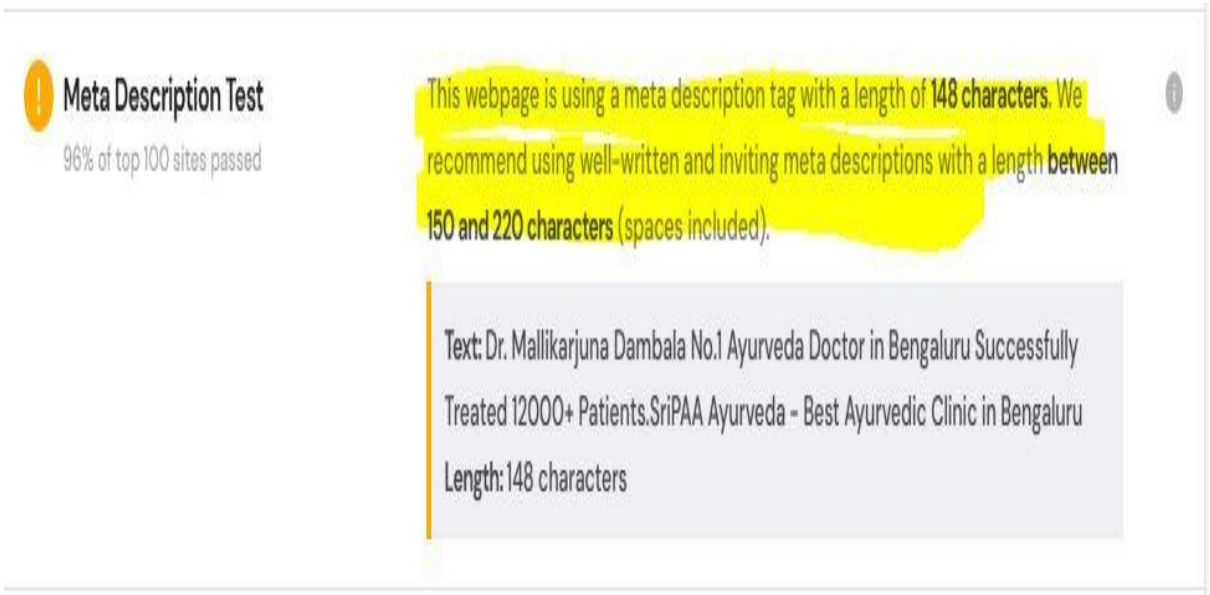

2) Site loading speed

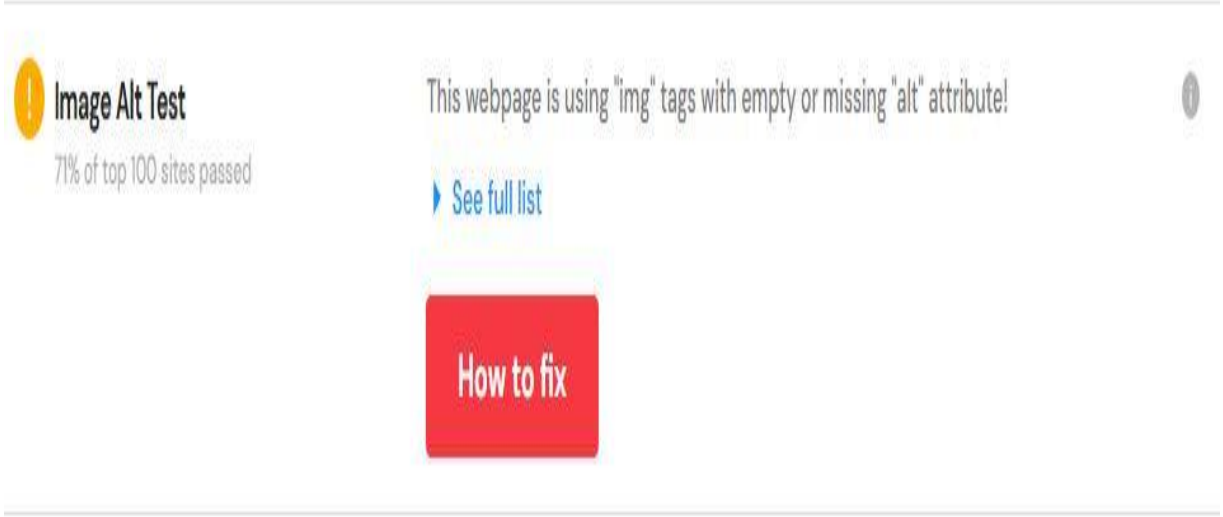

Suggestions to reduce site loading speed:

- **Optimize images**: Use the right file format for images, such as JPEG for complex images and PNG for images with transparency. Compress images to remove unnecessary data.
- **Reduce HTTP requests**: Reduce the number of HTTP requests made to the website.
- **Minify JavaScript and CSS**: Remove unnecessary characters like spaces and carriage returns from JavaScript and CSS files.
- **Use caching**: Cache web pages to save a static version of the page.
- **Use a good hosting provider**: Choose a hosting provider with high-quality servers and excellent performance.
- **Use Content Delivery Networks (CDNs)**: Use CDNs to improve website speed.
- **Reduce the number of files**: Remove unnecessary images, fonts, and third-party scripts.
- **Load files efficiently**: Use techniques like preload, async, or defer to load files efficiently.
- **Use AMP HTML**: Use AMP HTML when possible to benefit from the speed of AMP HTML and AMP JavaScript.
- **Replace sliders with static images**: Sliders typically require JavaScript to render the page, which can slow down the page load time.

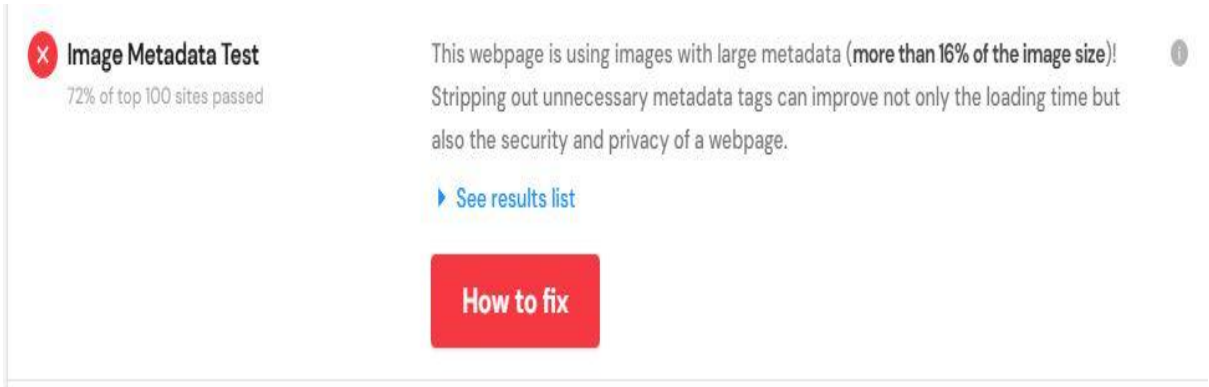

3) Meta description test

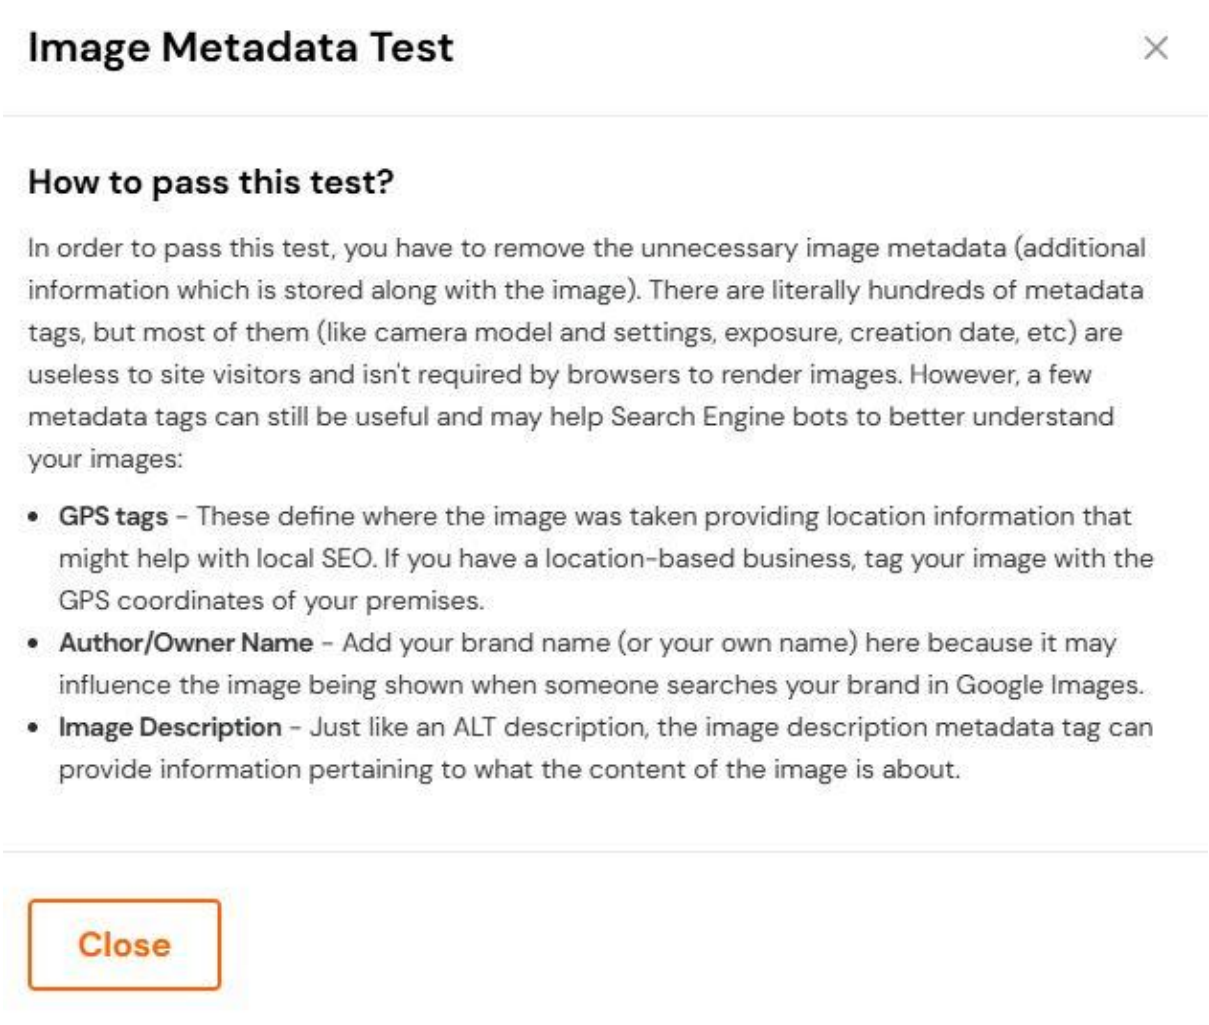

4) Image Alt Test

5) Image Metadata Test
