GMB Negative Reviews

maAx Super Speciality Hospital Negative Reviews

1. Experience.

My father-in-law was treated at MaAx Super Speciality Hospital, Shimoga under Dr. Rakesh Bisalehalli and assistant Prashanth for kidney stones and later stent removal.
In May, we were admitted for a kidney stone procedure under insurance and stayed for 3 days. We were not given a clear explanation of the treatment performed and were asked to return after one month for stent removal.
Before the second admission, we were informed that stent removal without insurance would cost around ₹20,000 with a one-day stay. However, after opting for cashless insurance, we were shocked to see a bill of approximately ₹1.29 lakh, with around ₹98,000 claimed through insurance and additional payment collected from us.
When we asked for clarification, we received different explanations from different people. The insurance department redirected us to the doctor's assistant, who claimed an additional procedure had been done. We were not provided with clear reports, scan details, or a satisfactory explanation regarding the treatment and charges.
The most disappointing part was the way our questions were handled. Instead of providing clear answers, we were sent from one department to another. There was reluctance to address our concerns directly, and we felt that accountability was completely missing.
This lack of transparency in communication, treatment details, and billing is extremely concerning. Patients and their families deserve honesty, proper documentation, informed consent, and clear explanations.
Shameful handling of genuine patient concerns. Based on our experience, I would advise others to carefully review all reports, consent documents, and billing details before proceeding with treatment.

2. We are sharing our experience regarding the treatment of my father (78 years), admitted at MaaX Hospital Shimoga from 24–26 May 2026 under Dr. Suresh B N.

While we are grateful for the attention provided during his stay, we have three serious concerns that we feel the hospital must address.
⚠️ CONCERN 1 — Broken promise of post-discharge support
At the time of discharge, Dr. Suresh B N explicitly assured us that we could contact him for any guidance after discharge. Trusting this, when my father started showing alarming symptoms — excessive drowsiness and worsening dizziness — within 2 days of returning home, we immediately tried to reach the doctor. We called the hospital 10–15 times over two days trying to connect. After two days of repeated failed attempts, we finally reached the coordinator, who coldly informed us that the doctor cannot give advice over the phone and that we should consult a local physician instead. This response was unacceptable. Those two days were completely wasted because of a promise that was never honoured. During this time my father's condition continued to deteriorate, and he suffered needlessly while we waited for help that never came.
⚠️ CONCERN 2 — Dangerous medication duplication at discharge

My father was prescribed Tab Nexovas-T 10/40mg (containing Amlodipine 10mg) at discharge, without verifying his existing cardiologist prescription of Tab Stamlo 5mg (Amlodipine 5mg) from Dr. Roopa R, Heart Care Clinic. This resulted in a total daily dose of 15mg Amlodipine — nearly double the standard maximum. Within days of discharge he developed severe leg swelling, facial puffiness, and worsening dizziness, requiring emergency re-admission in Hubli. This was entirely preventable with a basic medication reconciliation check.

⚠️ CONCERN 3 — Missed stroke diagnosis

My father was admitted with sudden onset giddiness, vomiting and generalised weakness — a high-risk presentation in a 78-year-old with hypertension and newly detected diabetes. He was discharged with a diagnosis of Non-specific Vertigo without an MRI brain being ordered. Following re-admission in Hubli, an MRI was performed immediately and confirmed a mild cerebellar stroke that had occurred before his MaaX admission. Had this been identified at MaaX, correct neurological treatment would have started 4–5 days earlier, significantly reducing the risk of a second stroke.

We share this not out of anger but out of genuine concern for other patients. When a doctor promises post-discharge support, patients and families make decisions based on that trust. Breaking that promise — and then hiding behind a coordinator's refusal — is not acceptable from a super-speciality hospital. We urge MaaX Hospital to review all three failures and put in place proper systems to protect future patients.

3. Doctors and coordinators are not clearly explain the problems and from morning till evening we were wait for doctors consultation but they won't coordinate with patients
4. This hospital is absolutely terrible. 👎 They give fake results and the night shift staff offers no help whatsoever. 😤 They care only about money, not people. I definitely recommend looking for other hospitals in Mangalore. Maax is just a name, not a place that saves lives. 😡💸
5. I personally had a very bad experience.
   Please stay away from this hospital.

   Before visiting this hospital, I assumed it was good, but my assumption was completely wrong. Everyone here seems money-minded,
   especially Dr. Narayana Panji, who was not good at all.
   I spent 3 days with my patient who had a very serious spinal injury. They were not able to do an MRI even after 3 days.
   Every day they gave a different reason to delay the MRI. Later we understood their intention was to make money by simply keeping the patient and extending the stay in the ICU.
   After 3 days, when we asked Dr. Narayan Panji for discharge, he denied it and shouted at us. He rudely said, "Why did you bring your patient to our hospital?"
   After a heated argument, I took my patient to another hospital. Within 2 hours of admission there, they completed the MRI and scheduled an emergency operation.

   Because of this incident, whenever others ask about this hospital, I share my worst experience

6. Treatment is good
   Hospital staffs not responding properly
   We are calling more then before 25days
   For Appointment for my brother treatment staff giving me next day next day this is the treating you giving
   you don't have mercy for patient
   This is the high rated of maax hospital
   Treatment i think is fake rating you taken
   Worst response ever I seen.

7. Highly Disorganized & No Respect for Patients' Time
   Very disappointing experience at MaAx Super Speciality Hospital. I arrived at 11:00 AM and waited until 6:30 PM, yet I was not able to consult Dr. Narayan Panji. This is not acceptable under any circumstances.
   This is the third time I am facing the same issue here, which clearly shows poor planning and complete mismanagement of OPD appointments.
   The receptionist outside the doctor's room is extremely rude and lacks basic courtesy. Patients come with serious health concerns, but the way they are spoken to here is completely disrespectful.
   Despite waiting the entire day, consultation fees are still being charged without even meeting the doctor. This is highly unprofessional. If the doctor is mainly available only for surgeries or in-patients, then stop taking OPD bookings and misleading patients.
   Overall, very poor service, no proper coordination, and zero value for patients' time.
   Patient ID: P310284

8. I am writing this with deep pain and disappointment regarding the treatment and post-death process at Max Super Speciality Hospital under Dr. Manjunath.

   My father passed away on February 2026, and this has been an extremely difficult time for our family. While we were already dealing with this loss, the experience at the hospital made things even more stressful and upsetting.

   Firstly, we are not satisfied with the handling of the case and overall care provided. Secondly, and more importantly, there has been serious negligence from the hospital management regarding the death registration process. Even after 25 days of my father's passing, the hospital has not properly updated or forwarded the required details to the Jilla Panchayat office for issuing the death certificate.

   This delay is unacceptable and has caused us significant emotional and practical difficulties during an already painful time. Basic responsibilities like timely documentation should not be neglected. After many follow up we got the documents a month later.

Due to this experience, I have completely lost trust in the hospital's system and management. I would not recommend this hospital to anyone.

I request the concerned authorities to look into this matter seriously and take necessary action so that no other family has to go through such distress

9. ದಯವಿಟ್ಟು ನಿಮ್ಮ ಮಲ್ಟಿ ಸೂಪರ್ ಸ್ಪೆಷಾಲಿಟಿ ಹಾಸ್ಪಿಟಲ್ ನಲ್ಲಿ ಪೇಷಂಟ್ ಕಡೆ ಅವರು ಕುತ್ಕೊಳ ಜಾಗದಲ್ಲಿ ದಯವಿಟ್ಟು ಫ್ಯಾನ್ ಹಾಕಿ ಫಾರ್ ಗಾಡಿ ಕೊಡಿ ಸ್ವಾಮಿ

10. It's utter disregard from the behaviour of the staffs who is maitaing the Hospital I have been advised by my family doctor to visit this hospital due the best doctor available and best equipments

    The Person who named security I have been sitting in the chair and told me to wake up in a rude way as it's basic scene if a person sitting in hospital with thousands of thoughts and this people even though they are not educated but basic humanity is lacking with them for everything they poit the hospital management

    And the security is Argus who is not part of hospital are not supposed to sit we respect that if anything is prescribed for some please highlight the same it will be benifit for the person before taking the place and please highlight the same in that chair I have attached no we're it's mentioned that it's designed for some

    Kindly look into it and ask your maintenance team to handle the each and everyone with respect

    Hoping for the change in behaviour in feature

11. I would like to bring to your notice the poor response from the reception regarding appointment booking.

    For the past three days, I have been trying to take an appointment with Dr. Narayan Panji sir. Unfortunately, the reception response has not been satisfactory. The assistant is not responding properly, and the contact number provided is always busy.

    This has caused a lot of inconvenience and delay in consultation. Kindly take the action.

12. Learn to give respect and value the time of patient..worst service ever i seen.. Especially Dr Narayana panji team don't they care about patient

13. Hospital Maintenance & Nursing staff's are good but consultant doctor: Dr Satish BC sir not providing proper information about patient like:patient suffering from this

disease and we are providing this type of medicine,thier is huge communication gap from Dr Satish BC even satish bc not providing patient report also once I asked the report he is saying I will provide once discharge process is completed

14. Money minded people. My cousin got with small accident and we admitted here in max hospital.it was 2:24pm exactly when we got admitted him but they took him to the CT scan at 6:57pm. They found that only coccyx bone was fractured.thats ok we too understand the priorities.but they did kidney function test,serum electrolytes,chest x ray ,virology and so many test after CT scan which is irrelevant at all.being a doctor myself I can surely say these test are required only if in case the patient undergoes surgery. But did so many tests and didn't even bothered to apply tincture to the wounds even though he stayed there for one complete day.my cousin got frustrated by this got discharged himself next day at 2:30pm. Earlier my aunts and my younger father got treated there it was very well equipped but this time I was really dissatisfied with their hospitality and treatment

15. Horrible hospital 0 care towards patients and 100% attention towards money. people can pay . improvise

16. "Worst experience, they don't take responsibility, and they are money-minded people. I was admitted on 29 September 2023, with abdominal pain. I suffered from severe stomach pain, fever, vomiting, and was unable to eat or drink anything. If I ate anything, even for a fraction of a second, I would vomit. They took 7 days to diagnose before finding out that they were continuously giving me glucose and tablets to reduce stomach pain.

17. Waiting waiting waiting that what i have found in this hospital.. worst management .... i have waited for 1 day for just a single sign not at

18. Worst experience ever! There is no sense of time management, especially from Dr. Narayan Panji. We had taken an appointment for 8:00 a.m. by phone, but he arrived only at 1:00 p.m. There is no proper token system—he calls patients randomly. When someone asks why they are being called late, he rudely says, “Take your file and go.” We waited until 6:05 p.m., and when we questioned the delay, his reaction was very rude. Overall, it was a very bad experience. There are many better neurologists in Shimoga—do not go to Maxx, especially to Dr. Narayan Panji. Whatever his qualifications may be, his behavior is extremely unprofessional.

19. It was a very bad experience, why did this happen? Even though we had made inquiries beforehand, we still had a very bad experience. No one should come to this MAXX hospital without asking about the ICU charge and how the total treatment will be.

20. Worst ever hospital lifts don't work and if you get admitted doctors won't come and have a chat they are printing money justusing patients

21. They didn't treat proper to the severely emergency patients , they seriously don't do proper examine of serious patients

22. Deeply Painful Experience

I took my brother to this hospital for treatment of fever. Despite having advanced facilities, they conducted numerous costly tests but still couldn't find the real cause of his illness.

It felt as though the patient was being used for unnecessary procedures instead of proper diagnosis and care. The doctors kept him in the ICU and discouraged us from taking him to another hospital.

Sadly, my brother didn't survive. This has left our family heartbroken. I hope no other family has to suffer like this.
They drained our pockets.

23. Phlebotomy area is the worst the staff are very rude they treat like they are providing free service to all

24. They don't have work ethics just committed to make money.Before admission the charges told,during the time of discharge it was 3ok more.

25. Worst hospital in shivmoga don't go here..

This is actually 0 rating,the most very worst hospital in shivmoga they need only money place don't go here 🙏

26. One of the worst hospitals to go to. At this hospital patients are asked about the medicine they want and then given without any examination of the disease. Even the tests to be done have to be suggested by patient. Emergency room at this hospital is not for Emergency, nobody comes to check on the patient till we tell them atleast 50 times. Had very bad experience with Dr Suresh and Dr Anirudh Udupa.

27. Posting this review on behalf of my wife, I have attached one of the invoice to prove not posting anonymously. This review is only in PRO of this hospital,

Doctors and treatment are all good,

I requested to PRO to talk to lab to the reports at the earliest as I was staying away one hour drive from home, it was almost 10.30 pm, the PRO did not respond properly, I was not satisfied with the assistance of PRO. I did not expected PRO to do any miracle to deliver the reports sooner from lab, but yes I was expecting some acceptable answers like will try or will inform, but PRO just said report will come when it's time to come 😂

Epic answer..

Since PRO did not respond properly I am going to cut down the rating..

Thank you

28. Worst hospital in Shimoga, don't go here..

Non medical staff are very rude especially Co ordinators,

29. This is actually 0 rating, no proper communication doctors are not available on time have to wait for more hours there are long patient 😔 waiting list still doctors are not available and they don't even respond properly. Don't ever come here for checkup

30. Worst hospital 🏥 only for money importence

Not pecent and ther family s emotions
My mother is left tha hospital

31. You will get an appointment and you will not find the doctor in the cabinet. Literally visited thrice for the same issue.

32. Especially am saying about Dr MANJUNATH from cardiac department. Yesterday I had admitted my mother. They have given a wrong report and miss guiding us. They told about kidney and heart failure by reffering the wrong report. Then after getting right report they are not informing any thing. Shame full peoples, ethic less. I am expressing it with a great pain from my heart. They had made it a bleady business in the name of treatment to fill their pockets. By playing with my mother life. Especially cardiac department

Nano hospital

1. The radiologist a lady was very unprofessional and lacked empathy. The patient had recently undergone surgery and was unable to stand comfortably, yet she was repeatedly forced to stand despite explaining her condition. I request that patients, especially those recovering from surgery, be treated with more care, patience, and compassion.

2. We were disappointed with our visit. The paediatrician(dr Rakhi sirkar) recommended an X-ray without physically examining our child's wound, and she seemed rushed while explaining options. We expected a careful assessment and clearer reasoning before ordering tests. We hope the clinic improves thoroughness and communication.

3. I had a very disappointing experience at Nano Hospital, Bangalore, especially in the emergency department.

The emergency area appeared to be poorly managed, with a lack of discipline and professionalism. I was also concerned about the way biomedical waste was being handled, as it did not seem to be disposed of properly, which raises serious hygiene and safety concerns.

The person sitting at the emergency reception behaved very rudely with patients and their attendants. He lacked basic courtesy, did not know how to communicate respectfully, and his attitude was completely unacceptable for someone working in a healthcare environment.

The doctor on duty in the emergency department did not inspire confidence. Instead of calmly explaining the patient's condition, he created unnecessary fear and anxiety. Patients visit a hospital expecting reassurance, proper communication, and compassionate care, but unfortunately, that was not my experience.

I also witnessed a nurse removing the stethoscope from the doctor's neck in front of patients, which appeared unprofessional and created a poor impression of the hospital staff and their coordination.

Overall, my experience at Nano Hospital was very disappointing. I hope the hospital management takes these issues seriously and improves staff behaviour, professionalism, hygiene standards, and patient care in the emergency department.

4. Very bad experience with nano hospital hulimavu , very inexperienced nursing staff . They have pricked very badly through out the hand and the person didn't know how to take blood . I am attaching my mom's hand photo hereby ,never recommend this hospital if you care for your dear ones.

5. Very bad experience with nano hospital hulimavu , very inexperienced nursing staff . They have pricked very badly through out the hand and the person didn't know how to take blood . I

am attaching my mom's hand photo hereby ,never recommend this hospital if you care for your dear ones.

6. If you have any option to go to anywhere else please don’t visit the causality ward of this hospital. They don’t follow basic sanity and safety protocol with patients. The doctor present don’t even have the basic humanity to explain medicines prescribed.

7. "I had a very good experience at Nano Hospital. The doctors and staff were professional, caring, and attentive throughout the treatment process. The hospital was clean and well-maintained, and the services were provided efficiently with minimal waiting time. The medical team explained everything clearly and made me feel comfortable and confident about my care. Thank you to everyone at Nano Hospital for your excellent service and support."

8. If you have any option to go to anywhere else please don’t visit the causality ward of this hospital. They don’t follow basic sanity and safety protocol with patients. The doctor present don’t even have the basic humanity to explain medicines prescribed.

9. Worst experience with Nano hospital pediatrician service. I definitely don't recommend this hospital as they are running business just for part time job. I have been asked to do unnecessary tests for my kid without proper diagnosis. I will not recommend this hospital, Worst exprience and horrible experience. I strongly recommend Don't get your kids to this hospital.

10. Will not recommend this hospital, Worst exprience the servies is word especially for the ortho department

Not recommended

11. Worst hospital in terms of patient care especially for kids less than 3 years. Dr's are very much negligence while prescribing medicine. Please be cautious and I don't recommended this hospyfor kids care. Very worst experience

12. Doctors are helpful yes, didn’t face any other problems than being misinformed and made to wait by the faculty as their brand publicity and app registration had more priority than the patient saying they don’t have the time to register into their app to “save” money which I didn’t by the way.

I’m from the hospitality industry. This can’t be the way.

13. Worst hospital worst experience never go to this hospital they will blade you like anything
14. Nano Hospital is the worstest hospital in the bangalore don’t go this is hell and don’t waste your money Not Nano its Blade
15. I recently had a very disappointing experience at this hospital. I would strongly not recommend this place for serious health issues, especially for elderly patients.

    The hospital seems more focused on making money than providing proper patient care. The service in the ward was very poor. Some nurses were rude towards patients and attendants, while a few were genuinely good and helpful. Many times, nurses were busy talking, singing, and enjoying among themselves instead of attending patients properly.

    They would simply tell us to take care of patient , without monitoring the patient’s condition. During the doctor’s rounds, the staff often did not have proper patient data or updates ready.

    Another major issue was billing. Extra and unnecessary charges were added to the bill, and when questioned, the staff gave unclear and useless explanations. They also pressured us to clear payments immediately.

    Overall, this was one of the worst hospital experiences I have ever had. Very poor management, unprofessional staff behavior, and complete lack of proper patient care. Patients should be treated with compassion, not as a business opportunity.

16. Dirty place with zero hygiene protocols followed. the emergency doctor doesn't have any bedside manners, no gloves, no sterile protocols followed. She treated the patient like a piece of trash. they don't even bother changing the disposable sheet after each patient.
17. We had a really bad experience, we really think twice before believeing any doctor's and hospitals henceforth . My Mother had visited to get her leg wound treatment, they gave us false declarations telling she was seriously ill and got her admitted n immediately shifted her to the icu , later came up with different complications n finally declared her dead ! She had turned pale n her body had turned cold yet they said she was on medication n treatment .

18. The front desk service was acceptable, but my experience with Dr. Anusha was extremely frustrating and unprofessional. We booked appointments three times, and on every single occasion, the doctor cancelled at the last minute.

During our most recent visit, we had already reached the hospital and waited for about 10 minutes before being informed that the appointment was cancelled.the worse is that the front desk had confirmed just 15 minutes earlier that the doctor would be available on time.This shows a complete lack of responsibility, and no respect for patients' time. Repeated last-minute cancellations like this are unacceptable.I would strongly advise others to avoid consulting Dr. Anusha (General Surgeon)

19. This is one of the worst hospitals I have ever experienced. Even for minor issues, they tend to recommend numerous tests, which feels more like a way to make money. Once the reports are ready, you are charged again just to review them with the doctor. I would strongly suggest thinking twice before visiting this hospital.
20. Nano Hospital, Hulimavu is a very disappointing experience. It feels like a money-minded hospital. Even to just review the blood report the next day, they charge another ₹500 consultation fee, which is unreasonable. They also insisted on unnecessary tests like ECG and X-ray that didn't seem required. Overall, I would not recommend this hospital.
21. Took appointment for Gastroenterologist on 7th Feb, doc left by the time the report got printed for abdominal scan, and today again doc left as I was on the way only 5 mins away from hospital and asked to come after 1 hr, the docs are not available even after taking the appointment, it's better to go to other hospitals where docs are available for a longer period of time

    Also taken appointment with gynaecologist, here even after telling her that the thread for Mirena is not visible, she wanted to try to take it out, but again with so much pain, failed, plus there were bed bugs on the examination bed on consultation room 5 which led to severe itching on hips, back and thighs till I reached home and changed my clothes post shower.

22. I had a blood ABG done for my mom. The report seems to have been sent to some phone number, which is not the right one. I then visited the hospital again seeking for a copy. To my surprise, i find that they dont keep copies of these and hence report is not available. This is not what Medical council rules say. Hospitals need to keep these reports for certain period of time. As a result, neither the report nor an insurance claim is feasible. This is very bad experience and the Nano management needs to take cognisance of .
23. Doctors are too good but unwanted charges are added in the bill and unskilled workers at the reception and billing. I don't recommend anyone to admit here.
24. Today's experience is very bad, as we came at 8:00pm. Waited till 1 hrs for appointment. They have VIP patient queue different receptionist Prashant who is allowing the other patients. After asking to the reception they are simply avoiding the conversation. Please be aware of walk in appointment means waiting time can be 1-2 hrs.

I start asking questions to Prashant, whose is arrogant and not given any clear explanation.

25. The worst hospital ever. I had taken appointment for doctor Namitha @ 1:20. I reached around 1:15 pm they say 6 patients are waiting how is that possible. Why do they even give appointments them 1-2 understandable. And ladies on reception are sooo well trained to lie. One says doctor went on rounds so got late one says there was an emergency. All lie. No value of time . I don't know how even they work.

Horrible place. I swear will never visit this place again.

26. The pharmacy dept here is extremely unprofessional. They denied giving medicine as we got treated in a different hospital. Extremely rude and unprofessional behaviour

27. I request all please don't enter this hospital they are here for making money but not for cure. They played with my 3 years little one.
    Worst service.

28. Very bad experience, OPD appointment they take over phone doesn't even matter. I took appointment of 11 Am, I was there at 10.45 am and I got number at 12.20 PM. That's almost 1 hour 40 min of wait for a OPD consultation. What's the point of appointment when it's not followed at all. Very bad experience.
29. The construction is ongoing, still accommodating in-house patients. It is quite noisy at the moment
30. This place is to costly it’s for serious if u have insurance they will swipe and make it zeroed ,this hospital motive is to make quick money ,no proper scheduling for doctors and no time line followed ,no proper co ordination towards patient and doctor ,really feed up with the process of the hospital their are no proper front desk to address or book appointment ,this hospital is good in terms of infrastructure but non experience nurses roaming around be careful if u don’t know simple nursing things they will necklet ,over all what I feel is they are or caring about patient they are having money making mindset ,horrible experience will never suggest or will visit again this hospital

31. Worst experience*

A tablet reaction admitted in hospital for one day they charge me 12,500.

Their primary objective is to admit them to the hospital to do major bill.

The billing department was completely pathetic answers, making the discharge process take 4 hours.

Not recommend

32. Hospital staff is pathetic and have no sense of empathy towards patients or their family. Its not the first time i had this experience here but this time it pinched a nerve. Took my 21 months old baby for blood test, the staff in emergency had no clue how to take blood of a baby.. he inserted the needle and started "SEARCHING" for the vein... 7-8 times he kept on moving the needle from left to right WHILE THE NEEDLE WAS INSIDE MY BABY'S HAND. upon questioning, the lady staff AISHWARYA behaved very rudely and along with her her maLe counterpart too (who was the one on the search mission) behaved rudely. Note: he couldn't find the vein and hence no blood was collected..only my baby's tears and screams were collected in my heart. We too had to fight and raise our voice just so that they understand our agony but then came the hero of the hour.. the senior ICU attending staff and ORDERED me to leave the baby with him and when i told him i wont (especially after what has happened) he zipped up his jacket and told me to go find another hospital.. on that i lost it and shouted that i am only requesting to be present with my baby but then madam AISHWARYA came to her friend's rescue and told me to "GET OUT OF THE HOSPITAL". Both these staff members were pointing fingers and showing rude hand gestures too to me and my father in law. Mind it, all this while my baby was crying and i was not ready to leave his side.. for a minor blood collection.

After informing the manager and telling him that i myself come from a very rich doctors' family background the Manager atleast tried to understand our side of the story and called another senior staff who then finally in ONE GO collected the blood thats what i call EXPERIENCE.
But why does it HAS TO come to this where the patient has to use such heights to just get a simple good behavior and not get insulted by the hospital staff. This is not an added benefit..it should be in their job description..anyone in medical line is expected to be polite and well behaved because thats one of the major factor that helps healing.
This is not the first rude behavior experience. The emergency staff (including the reception staff) behave horribly with patients, using absurd languages and talking bullshit about patients and family in their native language. They have no sense of empathy god knows how Nano hospitals have recruited them as any other hospital we go the nursing staff are really soft spoken and especially given trainings to attend patients and their families.
Everything is captured in cctv cameras (if they are operational) and Nano hospitals can see the footage.
Staff's Rude behavior, poor medical experience, arrogance, superior attitude and most of all thinking that hospital is their father's is what the gist of this review is.
If Nano hospitals doesnt take actions even after this ..then God knows what image they are trying to create in the market .because at the end of the day its all a business for them.

33. Had been for emergency pediatric issue, foreign particle swallowed/ struck in windpipe. Went to emergency , they didn't even check properly, not major, will give nebulizer, you can opt for pediatric consultatio for correct guidance. When checked with reception. They said consultation full and said can't give today. It was kind of emergency situation they didn't provide attention or consultatio. Was sick of their carelessness. Went to another doctor

Vijayabank colony. Atleast their the understood emergency and attended quickly. Such a careless hospital. Will never visit this hospital.

34. Worst experience, my mother had taken a blood check and scan appointment. Morning 7:04AM till now 4:31 PM we visited hospital 4 times , at 3:30 PM they asked us to come and collect the report . receptionist informed Dr Namita has left for the day , they asked us to wait till 4:30 for another doctor.since I informed will be sharing review, the receptionist informed me Dr Namita is in the ICU,apparently the Dr who left ended up seeing a patient in ICU .we waited from 4 till 4:30 PM now Dr Namita is doing rounds... (The said Dr who has left by 3:30 PM , then ended up in ICU to check a patient and later ended up doing rounds) Guess this is what is known as medical miracle !!!!!! What a lie these guys tell ...What a hospital and doctor.....then enters Pavithra the receptionist who laughs for no reason like a maniac ... These guys lack empathy , sympathy being in medical field . There are some 100 hospital staff roaming around with Nano uniform like nano particles.
35. Very disappointed with the service. Staff members are not cooperative at all. My OPD appointment was scheduled for 8:00 PM, but my turn came only at 9:00 PM. If there were an option to give 0 stars, I would definitely give 0.
36. My recent experience at this hospital's casualty department was disappointing. I visited with a pain in my right hip, but the doctor diagnosed it as a muscle strain and prescribed painkillers and a topical gel without a thorough examination. After seeking a second opinion at another hospital, the correct issue was identified and it was not a muscle starin. I would advise caution when considering this hospital for emergency care.
37. Extremely rude staff at Nano Hospital .especially the reception with their arrogant attitude specially female staff. Overcharged heavily for basic medication — totally disappointed.
38. Extremely rude staff at Nano Hospital .especially the reception with their arrogant attitude specially female staff. Overcharged heavily for basic medication — totally disappointed.
39. Worst experience.. Staff has no communication are rude thy only focus on how to extract money as much as thy can will never recommend this hospital
40. I don't know how people have given 4 star to this worst hospital.I always experienced the worst behaviour from their staff and they are very rude.People going to this hospital need to carry their food as this hospital doesn't know the time sense.
41. editing this review after the response.I’m appalled at the misleading and defensive nature of your response. Let me be absolutely clear: the diagnosis of a hemorrhagic stroke was not made by your team — it was already mentioned in the prescription from the previous doctor before we even arrived at your hospital. So, claiming credit for identifying the condition is completely false and frankly dishonest Furthermore, your insistence on ICU admission and the push for feeding through a tube was not only unnecessary but extremely distressing for our family. There was no proper justification given — only pressure and urgency that felt more like a sales tactic than genuine medical care. When we later took my mother to Aster RV Hospital, she was admitted only to a general ward, with no ICU required and certainly no mention of feeding tubes. That alone speaks volumes about the credibility of your treatment approacht is extremely clear to me now that the intention was to extract money under the

guise of “observation” and “monitoring.” This is not just bad service — it’s a shameful exploitation of families during medical emergencies. I sincerely hope no other family has to endure the emotional and financial distress that we went through under your care.Absolutely would not recommend your hospital to anyone. The experience was terrifying, disheartening, and felt more like dealing with a profit-driven business than compassionate healthcare professionals.**********Absolutely Disappointed!!I am extremely dissatisfied with the way my mother was treated at this hospital. Despite our doctor clearly advising just 2 days of observation, the hospital staff insisted on admitting her directly to the ICU, claiming it was necessary — without proper justification or explanation.It was very evident that this was medically unnecessary and purely for financial gain. When we shifted her to a different hospital, she was admitted to a normal ward, received proper care, and recovered without any complications — no ICU was ever needed.This experience was not only distressing for our family but also raised serious concerns about the ethics and integrity of the decision-making at this facility. Forcing patients into high-cost care units without clear medical need is not just unprofessional, it’s unethical.I strongly urge anyone considering this hospital to think twice and seek a second opinion. Patients deserve transparency, empathy, and genuine medical care — not exploitation.

42. They provide the fake appointments over the call, post visiting hospital after the scheduled time they make patient wait for another 1 to 1 and half hour.As soon as u enter and talk to the reception, they take the patient details and proceed for payment first, "Money first, treatment next" is the best tagline for this hospitalWorst experience, never recommend this to anyone
43. visited Nano Hospital post going through the reviews. Can’t tell how much I am disappointed when visited for some health related issue. All the staffs were very much adamant and rude. They only focus on one thing- try to extract as much money they can from the patients. They have entirely forgotten that they in health service sector where the health of patient should be first priority. They will force u to avail their services and pay even if it is not relevant.I will never recommend any one to visit Nano Hospital. Worst services.

Trusacn

1. Worst place waiting here from 1 hour 30 minutes but still our number is not coming who they are coming after me there number coming before me don't know which number or rules they arefollowing
2. Waiting time is too much. If you are okay to wait for hours for the scan, then you can visit here, else look for alternate options. I went for doppler scan, waited more than 1 hour. if the patients are more, you can have multiple scan rooms. Dont think that patients and attender

dont have any other job than just sitting in your clinic and wait.I came on saturday and returned back as waiting was more than 2 hours. Came in week day still the same.

3. The phlebotomist who came to collect the blood sample to our society did not know how to use the syringe and ended up bruising my arm near the site blood was drawn from. Upon highlighting the issue, they casually dismissed it saying, "it happens".

4. Very disappointing experience with TruScan Diagnostics. Before visiting, I confirmed multiple times over phone that they could perform the exact MRI protocol prescribed by my doctor for suspected CSF leak evaluation, including thin-slice 0.8 mm skull base MRI and MR cisternography.

After traveling around 25 km through Bangalore traffic and reaching the center, I was informed that their MRI machine does not support 0.8 mm imaging and that they do not have the required advanced protocol capability. This raises concerns that the technology/equipment being used may be outdated for specialized neuro and skull-base imaging requirements.
This caused unnecessary stress, wasted several hours, travel cost, and delayed important medical testing. For specialized scans like skull base MRI and CSF leak protocols, accurate information should be provided upfront instead of confirming capabilities they do not actually have.
I would strongly suggest patients with specialized neuro/skull-base imaging requirements confirm the exact technical specifications in writing before visiting.

5. REPEATED MISDIAGNOSIS: We keep going to this lab since it's near to us. 3 different situations lead to medical emergency for us. Once they couldn't identify appendicitis due to which it led to surgery in my family.

2nd situation is they couldn't perform all reports as prescribed by doctor and mentioned infection as positive which is not an infection upon re-test.
3rd they mentioned an abdominal opening upon ultrasound scan, we got a scan done again at a hospital which doesn't show any opening at all.
Utterly frustrated with this medical negligence due to which we have to get rescans done and get stressed. Not able to trust this lab now

6. After the checkup is done they don’t care about the reports, I have been calling them to send reports which is now more than 48 hours

They told a cardiologist will check and reply but no one called or anything so far

7. My experience at Truscan Diagnostics today was disappointing due to poor handling of basic patient facilities.

Despite reminding staff multiple times, the water dispenser remained unrefilled for more than 15 minutes and wasn’t maintained consistently. At the same time, the focus seemed to be on pushing patients to follow social media pages rather than ensuring basic amenities are in places. (very much interested in Marketing & promotion)

8. Had a bilateral breast USG done here and was very disappointed. The entire scan was done in under 5 minutes with the radiologist visibly confused and changing her dictation multiple times. The report came back with a BI-RADS 4A finding causing significant unnecessary anxiety.

On my specialist's advice I repeated the scan elsewhere — it came back completely normal, BI-RADS 2 benign. A rushed, inaccurate report is not just a medical error, it causes real mental distress and unnecessary expenses. Would strongly advise women to avoid this center for your scan

9. Worst diagnostic centreThey expect u to come 3/4 timesThey don't anything organisedCardiologist is available only after 4But they'll make u wait 1.5 hrsPls don't come

10. Visited Truscan Diagnostic for my partner's NCS test.The good - The procedure itself was quick (around 10–15 minutes), and the technician was skilled and efficient. Reports were provided immediately, which was very helpful. The ground floor staff were also reasonably accommodating.The Bad - Despite only a few patients ahead of us, we had to wait over an hour with no clear indication of wait time. The first floor staff spoke to me instead of the patient (my partner), which felt inappropriate. Additionally, some attendants were quite rude. They were shouting names and showing little patience, especially towards elderly patients.Good technical service, but the patient handling and overall experience need significant improvement.Update - I got a call from their customer service guys asking what happened, all because I left this review. The worst part of it all was that the lady on the other side was apathetic. She said Got it sir. She asked me What can they to change it?It was quite evident that this review is something they didn't like, and instead of solving their internal problems, they're blaming the technician coming late, not even acknowledging the gender discrimination and poor communication that they showed.
11. We have been visiting to truscan on Doctor's advice, but what i noticed is they are 40 to 50 % expensive than other diagnostic centres and even blood test's are expensive and home collection also not good.I request them to make it affordable to all classes of people.
12. my father is a cancer patient, they called me 8am in the morning for mri with contrast they took more than 5hrs for a 1hr procedure, nurses put the cannula wrongly which resulted in swelling in whole hand and for diabetic cancer patient thet made us wait for 3-4hrs literally fasting and then they say you will have to come again in the evening for another sequencing, a really bad experience with the lab, careless employees wrong diagnosis and totally useless

13. TruScan Diagnostics is not a good place for a comprehensive health check-up. My spouse and I recently booked the Master / high-end health check-up package, and the overall

experience was very disappointing.Despite paying premium pricing, several important and commonly recommended preventive tests were NOT covered in the top-tier plan, including:Lipoprotein(a) [Lp(a)]hs-CRP (High-sensitivity C-Reactive Protein)HomocysteineInsulin test (pre and post)ESR (Erythrocyte Sedimentation Rate)These tests are essential for cardiovascular risk assessment, metabolic health, and inflammation monitoring and are usually expected in a high-end or master health check-up. This lack of coverage was not clearly communicated at the time of booking.We had specifically planned to get a DEXA scan, but on the day of the appointment we were informed that the DEXA machine was under repair. This should have been communicated in advance.The blood sample collection experience was poor. The technician appeared inexperienced and had to poke multiple times, which was extremely painful.There were also serious concerns around patient privacy and professionalism:Male doctors performing Echo tests on female patients were not accompanied by female staff, which made my wife uncomfortable.There was no clear explanation given about where and why the doctor was touching during the Echo procedure.ECG tests were poorly organized; gel was applied and staff left the room to find printing paper, leaving the room open and compromising patient privacy.Other patients were allowed to enter the room while someone was lying on the bed in patient clothing.Additionally, there was no clear communication regarding report delivery timelines. Some reports were given immediately, while others were delayed. Even after waiting, all reports have still not been received.Overall, the experience lacked transparency, professionalism, organization, and value for money. Given the premium pricing and multiple issues faced, this was a poor experience, and I do not recommend TruScan Diagnostics.

14. Do not visit here for endoscopy. Doctor who do endoscopy doesn't have patience and was very rude. A doctor should first make the patient comfortable. He didn't even talk to patient and rushed to insert the pipe quickly without bothering what patient is feeling.Even he won't bother about the patient's with senior citizens also he talk very rudely.Dr Goutham needs some training how to behave with a patient's.Definitely not recommended specially for Endoscopy.Very poor

15. We visited TruScan on 18th Nov for a Cardiology consultation with Dr. Vital D. Bagi. I want to clarify that there is no issue with the doctor. This review is purely about the staff behaviour, poor coordination, and lack of proper process.When I called the clinic for an appointment, they asked us to come at 4:45 PM. We reached by 4:40 PM, but the front office staff simply asked us to wait. The doctor arrived around 5:30 PM, yet the staff kept insisting that they follow a "first come, first serve" system. However, several patients who came after us were sent in before us. When I questioned the staff, their responses were inconsistent, unprofessional, and not convincing at all.After the consultation and ECO test, we again had to wait more than 45 minutes just to collect the report. The overall process went from 4:45 PM to 8:00 PM, which is over 3 + hours for a simple consultation and test.On top of this, I noticed that a different patient's prescription was kept in our file by mistake, and the patient had already left the clinic. I had to bring this up and return the document back to the staff. This clearly shows a serious lack of attention and poor handling of patient records, which

can be risky.Many other patients waiting for lab tests and other doctor consultations were also frustrated and repeatedly asking how long they had to wait.It also appeared that the clinic was giving priority to package customers, ignoring the actual arrival order.Suggestion:The clinic should implement a proper token system or time-slot based appointment system to ensure a smooth and fair process for everyone. This would avoid confusion and help the staff manage patients more efficiently.Overall, the clinic shows poor coordination, lack of process, and no respect for patients time. Based on this experience, I do not recommend this diagnostic centre for consultations or tests.Sharing this so others can choose a place that respects patients, follows a proper process, and values their time.

16. Services were goodBut when a male doctor is scanning female patients there should be a female nurse present. The nurse. Will go out during the scan .It makes patients uncomfortable
17. Worst faculty and focusing only on the marketing strategy. As soon we enter to the scanning center, from that time only their marketing team catch us and start speaking about unwanted cash back offers. They are going complete into the business.
18. Brought my 88-year-old grandmother in for a leg scan and had to wait over an one and half hour just for a 5-minute procedure. Extremely frustrating and uncomfortable for her at her age. Disappointed with the wait time and lack of consideration for elderly patients
19. I had a very disappointing experience with this doctor Gowtham endoscopy The way I was spoken to felt dismissive and unprofessional. Instead of listening patiently, the doctor seemed rushed and uninterested in what I was trying to explain. I expect a doctor to show empathy and understanding, but unfortunately, that was not the case here. A little kindness goes a long way, especially when dealing with patients who are already anxious or unwell. I hope they reflect on this and work on improving their communication and bedside manner and I don’t recommend this treatment in this diagnose centre
20. Do not visit here for endoscopy. Doctor who do endoscopy doesn’t have patience and was very rude. A doctor should first make the patient comfortable. He didn’t even talk to patient and rushed to insert the pipe quickly without bothering what patient is feeling. Dedicate enough time for each patient. He couldn’t complete the scan. Quickly packed his machine and ran away- definitely he had many appointments in other places. Vomited blood not sure if it is normal. He said send her out send her out. Very bad experience even after waiting for more than ah hour.
21. Don’t visit this diagonstic center, my father visited on July 11th 2025 Basavaraj to test is health check up and report came as diabetic with Hba1c as 7.1 and for confirmation we tested with Apollo and Tata 1 mg and his average sugar level is 6.3.My request is don’t take your lab test as final in this diagnostic as they are not accurate and I ended my 70 year old father taking unnessaey medicine for SugarThe rating mentioned here is cooked data.Just for sake is saving few thousands we will ended up getting bad report

22. Earlier their services were fabulous. But from a few months they are not even responding properly. For home collection booking and even for reports they delay a lot. So many times I need to call for booking and report.
23. Pathetic state in the Diagnotics. Staff in the reception are misguiding the patient. They are not aware on the rates for the diagnosis. Very sad to share the horrible experience. The diagnostic centre claims 24/7 C T scan etc .Morning we reached at 8.45 and were made to wait until 11.30 Infact we were the second one to enterThey made us wait unnecessarily. We fail to understand why we were made to wait so long. Each patient has their own struggle and for no reason if they have to wait will not be appreciated. Infact all the examinations are in preview of the surgery where it is mentioned clearly.
24. Pathetic staff…They don’t have communication between them … they even don’t care about patients, not well organised waste of money.
